Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                The invention relates to a peptide conjugate having the formula:

(R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where the functional group is attached to the C-terminus of the peptide where the functional group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain to group is constant of the peptide, where the side chain functional group is COOH or two double bonds, cyclobutyl cyclopentyl cyclohexyl containing one or two double bonds, cyclobutyl cyclopentyl cyclohexyl optionally monosubstituted with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides ABB7001-B37061 sepresent examples of the peptide portried of the conjugate. The peptides represent analogues of a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of the BH3 domain of the cell death agouist Bad. The peptide conjugate is called the cell death agouist Bad. The peptide conjugate is called the cell death agouist Bad. The peptide conjugate is called blockage of apoptosis in cancer cells. It is also useful for inhibiting Bcl-2 function. In particular, the peptide conjugate is useful for treating a conjugate is useful for modular characterized by cancer cells that express Bcl-2. The cancer characterized by cancer cells that express Bcl-2. The cancer includes prostate, colorectal, gastric, nor manil lung, renal or thyroid cancers, neuroblastoma, melanoma, or conjugate is also useful gor treating dispraces belonged anonyment of the conjugate is also useful for treating dispraced by concerd and peptide conjugate is also useful for treating dispraces belonged anonyment of the constant of anonyment of the conjugate is also useful for treating dispraces belonged anonyment of the conjugate is also useful for treating dispraces belonged anonyment of the conjugate is also useful for treating dispraces belonged and the constant of the conjugate is also useful for treating dispraces the conjugate is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    BCI-XL/BCI-2 associated cell death regulator; BAD; mutant; apoptosis; immunostimulant; neuroprotective; nootropic; antiischaemic; vulnerary; cytostatic; antiviral; antiarthritic; antiinflammatory; wound healing; mmunosuppressive, apoptosis inducer; apoptosis inhibitor; cancer; immunodefictency disease; neurodegencrative disease; viral infection; ischaemic cell death; reperfusion cell death, arthritis; infertility; lymphoproliferative condition; inflammation; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                New peptide conjugates for modulating apoptosis or for inhibiting cell lymphoma/leukemia 2 (Bcl-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               increased apoptosis, e.g. neurodegenerative disorders, acquired immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .

The present invention describes an isolated or synthetic polypeptide

[1] Comprising a less than full length amino acid sequence of a mutant bel-XL/Bcl-1 associated cell death regulator polypeptide (BAD) or its fragment, which contains amino acid substitutions at Serli8 of a human BAD, Serl55 of a murine BAD (longer murine BAD) or Serl13 of a murine BAD. Serli5 of a murine BAD (longer murine BAD) or Serli3 of a murine BAD (longer murine BAD) or Serli3 of a murine BAD (longer murine BAD) or Serli3 of a murine BAD (longer murine BAD) or Serli3 of a murine and interpretaints of a murine BAD (longer murine BAD) or Serli3 of a murine and interpretaints of a murine BAD (longer murine BAD) or Serli3 of a murine BAD (longer murine BAD) or Serli3 of a murine BAD (longer murine) or notivity that promote cell survival or apoptosis. Other uses include to a cultified and (mutant) BAD polypeptides are useful in treating immunodeficiency diseases, neurodegenerative diseases, ischaemic cell death, wound healing, cancer, viral infections, lymphoproliferative conditions, arthritis, infertility, inflammation and autoimmune diseases. The present invention describes mutant bad bell-injured associated cell death regulator) proteins, having an amino acid other than Ser at position 112 and/or 136, relative to the murine BAD 204 as sequence. The present sequence is the murine BAD protein. Also described are: (1) fragments of mutant BAD protein able to decrease cell viability; (2) tusion proteins of mutant BAD protein able to decrease cell viability; (2) cusion proteins of mutant BAD protein able to decrease cell viability; (2) increases intracellular delivery. Mutant BAD proteins are used to treat or inflammation and autoimmune disease. Polymucleotide sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins phosphorylated at specified Ser are used to screen for enhancers and inhibitors of serime-phosphatase. Inhibitors are potentially useful in treatment of excessive apoptosis such as AIDS, neurodegeneration, aging or ischaemic cell death. The apoptotic status of cells is determined by measuring relative amounts of phosphorylated BAD, by usual immunoassays. Mutant BAD proteins have greater death-promoting activity than wild-type BAD which can become phosphorylated mutants with BCL-2 or BCL-XL but instead binds to 14-3-3 family better substituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Murine; mouse; BCL-XL/BCL-2 associated cell death regulator; BAD protein; serine substituted mutant; apoptosis; cancer; viral infection.
                                                                                                                                                                                                           present invention describes mutant BAD (BCL-XL/BCL-2 associated cell
                                                                New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or viral infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mutant BCL-XL/BCL-2 associated cell death regulator #1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ДX
                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents the murine bcl-x(L)/bcl-2 associated death bcl-x (Bad) gene. Bad is a 22.1 kD protein which interacts with bcl-2 and bcl-x proteins and regulates cell death. It has homology to the bcl-2-related family clustered in the BH1 and BH2 domain. Bad has been found to hybridise to bcl-x(L) and bcl-2 in yeast two-hybrid assays and in vivo in mammalian cells. Overexpressed Bad counters the death inhibitory activity of Dcl-x(L), but is much less effective at countering the death inhibitory activity of bcl-x(L), but is much less effective at accelerate apoptotic cell death induced by cytokine deprivation in an IL-3 dependent cell line expressing bcl-x(L), and its also counters the death repressor activity of bcl-x(L). Bad competes with Bax for binding to bcl-x(L). Bad may be used to identify agents which inhibit its binding to bcl-2 or bcl-x(L) to form heterodimers. Such agents may be used to treat neurodegenerative diseases, immunodeficiency diseases,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δă
                                                                                              The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell death regulator) proteins, having an amino acid other than Ser at position 112 and/or 136, relative to the murine BAD 204 as sequence. The present sequence represents a mutant BAD protein. Also described are: (1) fragments of mutant BAD protein. Also described are: (2) fragments of mutant BAD with a heterologous polypeptide that increases intracellular delivery. Mutant BAD proteins are used to treat or prevent diseases associated with reduced apoptosis, e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility, inflammation and autoimmune disease. Polymucleotide sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease. Modified Ser are used to creen for enhancers and inhibitors of serime-phosphatase. Inhibitors are potentially useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                    0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Murine; mouse; BCL-XL/BCL-2 associated cell death regulator; BAD protein; serine substituted mutant; apoptosis; cancer; viral infection.
                                                                                                                                                                                                                                                                                                             phosphorylated BAD, by usual immunoassays. Mutant BAD proteins have greater death-promoting activity than wild-type BAD which can become phosphorylated on the specified Ser, forming a product that does not heterodimerise with BCL-2 or BCL-XL but instead binds to 14-3-3 family proteins in the cytosol, thus promoting cell survival. The mutants with Ser substituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                       in treatment of excessive apoptosis such as AIDS, neurodegeneration, aging or ischaemic cell death. The apoptotic status of cells is determined by measuring relative amounts of phosphorylated and non-
                        New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or viral infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell death regulator) proteins, having an amino acid other than Ser at position 112 and/or 136, relative to the murine BAD 204 as sequence. The position 112 and/or 136, relative to the murine BAD 204 as sequence. The present sequence represents a mutant BAD protein. Also described are: (1) fragments of mutant BAD with a heterologous polypeptide that increases intracellular delivery. Mutant BAD proteins are used to treat or prevent diseases associated with reduced apoptosis, e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility, inflammation and autoimmune disease. Polymotheotide sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins phosphorylated as pepticis ser potentially useful in hibbitors of serime-phosphatase. Inhibitors are potentially useful in treatment of excessive apoptosis such as AIDS, neurodegeneration, and inhibitors of serime-phosphatase. Inhibitors of cells is determined by measuring relative amounts of phosphorylated BAD, by usual immunoassays. Mutant BAD proteins have phosphorylated BAD, by usual immunoassays. Mutant BAD proteins have phosphorylated on the specified Ser, forming a product that does not beterodimenties with BCL-2 or BCL-XL but instead binds to 14-3-3 family serime that the cytosol, thus promoting cell survival. The mutants with the substituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Murine; mouse; BCL-XL/BCL-2 associated cell death regulator; BAD protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0;

              QΥ
                                                                                                                                                             death regulator) proteins, having an amino acid other than Ser at position 112 and/or 136, relative to the murine BAD 204 as sequence. The present sequence represents a mutant BAD protein. Also described are: (1) fragments of mutant BAD protein able to decrease cell viability; (2) fusion proteins of mutant BAD with a heterologous polypeptide that increases intracellular delivery. Mutant BAD proteins are used to treat or prevent diseases associated with reduced apoptosis, e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility, infammation and autoimmune disease. Polymucleotide sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins phosphorylated at specified Ser are used to screen for enhancers and inhibitors of serime-phosphatase. Inhibitors are potentially useful in treatment of excessive apoptosis such as AIDS, neurodegeneration, adetermined by measuring relative amounts of phosphorylated BAD, by usual immunoassays. Mutant BAD proteins have greater death-promoting activity than wild-type BAD which can become phosphorylated on the Specified Ser, forming a product that does not beterodimerise with BCL-2 or BCL-XL but instead binds to 14-3-3 family ser substituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô
                                                                                                                                               The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 BAD protein, Bcl-XL/Bcl-2 associated cell death regulator; 14-3-3; serine phosphorylation; post-translational modification; apoptosis; signal transduction regulator; phosphoserine phosphatase; senescence; immunodeficiency disease; neurodegenerative disease; infertility; cancer, viral infection; jamphoproliferative condition; arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or viral infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

This sequence represents a novel serine-phosphorylated protein, BAD (BC1-X1/Rol-2 associated cell death regulator). The serine residue is phosporylated in a post-translational modification and allows binding to the 14-3-3 protein which is a signal transduction regulator. Modulators of phosphorylated BAD, which act through inhibition/activation of a phosphoserine phosphatase, are useful for preventing/treating increased/Accreased apoptosis in a cell. The increased apoptosis may result from immunodeficiency diseases, senescence, neurodegenerative disease, ischemic cell death, reperfusion cell death, infertility and wound-healing. Decreased apoptosis may result from cancer, viral infertion, lymphoproliferative conditions, arthritis, infertility, inflammation and autoimmune diseases. Messuring the amount of phosphorylated compared to unphosphorylated BAD polypeptide and/or total BAD in a cell is useful for determining the apoptotic state of a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bcl-XL/Bcl-2 associated cell death regulator; BAD; mutant; apoptosis; immunostimulant; neuroprotective; nootropic; antiistcheemic; vulnerary; cytostatic; antiviral; antiarthritic; antiinflammatory; wound healing; immunosuppressive; apoptosis inducer; apoptosis inhibitor; cancer; immunodeficiency disease; neurodegenerative disease; viral infection; isobaemic cell death; reperfusion cell death; arthritis; infertility; lymphoproliferative condition; inflammation; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New mutant Bcl-XL/Bcl-2 Associated Cell Death Regulator polypeptide, useful for screening for candidate compounds which induce or inhibit apoptosis, comprises amino acid substitutions at Serll8, Serl55 or Serl13
Serine-phosphorylated Bcl-X-1/Bcl-2 Associated cell Death regulator polypeptide - useful for modulation of apoptosis associated with, e.g. cancer and immunodeficiency diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ·

described is a method (M2) for treating a patient infected with HSV, by administering to the patient, a composition comprising a peptide comprising a sequence of 4-100 continuous amino acids of a 168 residue amino acids equence (see ABR30081), where the peptide comprises saril2, ser135, or ser155, or their combinations. BAD has virucide activity. M1 is useful for inducing apoptosis in a cell infected with HSV, where the cell is in a human M2 is useful for treating a patient infected with HSV. The present sequence represents murine BAD, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel fusion protein for modifying apoptosis in target cell and reducing apoptosis after transient ischaemic neuronal injury, has two domains which targets protein to a cell and modifies apoptotic response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence represents the amino acid sequence of Bad-DTTR apoptosis-modifying fusion protein comprising Bad gene sequence fused via a short linker to diphtheria toxin translocation domain (DTTR). The functional apoptosis-modifying fusion protein is capable of binding a target cell and integrating into or crossing a cellular membrane of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  diphtheria toxin receptor binding domain; DTR; neoplasm; tumour; hyper-proliferation; Alzheimer's disease; neurodegenerative disorder; transient ischaemic neuronal injury; stroke; spinal cord injury;

target cell. The apoptosis-modifying fusion protein comprises at least

two domains: the DTR domain, which targets the fusion protein to the

crayet cell and the Bel-Mi domain, which modifies an apoptotic response

of the target cell. The fusion protein is useful for modifying

(inhibiting or enhancing) apoptosis in a target cell, such as neuron,

tymphocyte, cancer, neoplasm, macrophage, epithelial, stem, tumour or

hyper-proliferative cell or an adipocyte. It is also useful for reducing

apoptosis in a subject after transient ischaemic neuronal injury,

cspecially spinal cord injury. The fusion protein may be used to treat

various diseases and injury conditions through inhibition or enhancement

of apoptotic cellular response, including neurodegenerative discorders

cuch as Alzheimer's disease, Huntington's disease, spinal muscular

atrophy, stroke episodes and unrequlated cell growth as in tumours and

various cancers. The apoptosis-modifying fusion protein can be delivered

effectively throughout the body and targeted to selective tissue and
                                                                                                                                                                                                                                                                                                                                                                                                                                           0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a peptide conjugate having the formula: (R^-X)^n -peptide where n = 1-10; X = C=0, when the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where the functional group of the side chain is NH2 or OH; or X = 0 or NH, when the R-X group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is COOH
                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cytostatic; neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bcl-2 superfamily; BH3 domain; cell death agonist; Bad; apoptosis modulation; B cell lymphoma/leukemia 2; cancer; prostate; colorectal; gastric; non-small lung; renal; thyroid; neuroblastoma; melanoma; lymphocytic leukemia; neurodegenerative disorder; AIDS; stroke; myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New peptide conjugates for modulating apoptosis or for inhibiting cell lymphoma/leukemia 2 (Bcl-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer

or CONHEZ; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally monosubstituted with a 1-5C straight or branched chain alkyl group, or benzyl The perided with a 1-5C straight or branched chain alkyl group, or benzyl The peptided ABB7001-B37058 represent analogues of the peptide portion of the conjugate. The peptides represent analogues of a Bc1-2 superfamily pulpeptide corresponding to amino acids 72-97 of the BH3 domain of the cell death agonist Bad. The peptide conjugate is useful for modulating apoptosis in the cells of a subject, or for reversing B cell lymphoma/leukemia 2 (Bc1-2)-mediated blockage of apoptosis in cancer cells. It is also useful for inhibiting Bc1-2 function. In particular, the peptide conjugate is useful for treating a subject afflicted with a cancer characterized by cancer cells that cancer characterized by cancer cells that consmall lung, renal or thyroid cancers, colorectal, gastric, nor small lung, renal or thyroid cancers, neuroblastoma, melanoma, or conjugate is also useful for treating disorders characterized by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a peptide conjugate having the formula: (R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cytostatic; neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bol-2 superfamily; BH3 domain; cell death agonist; Bad; apoptosis modulation; B cell lymphoma/leukemia 2; cancer; prostate; colorectal; gastric; non-small lung; renal; thyroid; neuroblastoma; melanoma; lymphocytic leukemia; neurodegenerative disorder; AIDS;
                                                                                                                                                                                                                                                                                                                                               increased apoptosis, e.g. neurodegenerative disorders, acquired immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New peptide conjugates for modulating apoptosis or for inhibiting cell lymphoma/leukemia 2 (Bcl-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

when the R.Y group is attached to the Cterminus of the peptide, or a side chain of the peptide, where the side chain functional group is constanting one or cowniz, and R = 2.18c alkyl or alkoxy, 2.14c alkylenyl containing one or two double bonds, cyclobutyl, cyclopentyl, cyclohaxyl optionally monsubstituted with a 1.5c straight or branched chain alkyl group, phenyl optionally monsubstituted with a 1.5c straight or branched chain alkyl group, or benzyl. The peptides Aba37001-B37058 represent analogues of the peptide portion of the conjugate. The peptides represent analogues of the peptide portion of the conjugate. The peptides conjugate is useful for modulating apoptosis in the cells of a subject, or for reversing B cell lymphoma/leukemia 2 (Bcl.2). "mediated blockage of apoptosis in cancer cells. It is also useful for inhibiting Bcl.2 function. In particular, the peptide conjugate is useful for treating a subject afflicted with a cancer characterized by cancer cells that cancer characterized by cancer cells that cancer characterized by cancer calls that cancer includes prostate, colorectal, gastric, on-small lung, renal or thyroid cancers, neuroblastoma, melanoma, or acute or chronic lymphocytic and non-lymphocytic laukemia. The peptide conjugate is also useful for treating disorders characterized by immunodefliciency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ó

Claim 18; Page 19; 74pp; English.

```
The invention relates to a peptide conjugate having the formula:

(R-X)n-peptide where n = 1-10; x = C=O, when the R-X group is attached to the Verminus of the peptide, or a side chain of the peptide where the functional group of the side chain is NH2 or OH; or X = O or NH, when the R-X group is attached to the C-terminus of the peptide, or a side chain functional group is COOH or CONH2; and R = 2-18C aikyl or alkoxy, 2-14C aikylenyl containing one or CONH2; and R = 2-18C aikyl or alkoxy, 2-14C aikylenyl containing one or CONH2; and R = 2-18C aikyl or alkoxy, 2-14C aikylenyl containing one or coubstituted with a 1-5C straight or branched chain phenyl optionally monosubstituted with a 1-5C straight or branched chain phenyl optionally monosubstituted with a 1-5C straight or branched chain of the peptide portion of the conjugate. The peptides represent analogues of the peptide portion of the conjugate. The peptides represent analogues of a Bcl-2 superiamily polypeptide corresponding to amino acids 72-97 of the BH3 domain of the call death agonist Bad. The peptide conjugate is useful for modulating apoptosis in the cells of a subject, or for reversing B cell lymphoma-leukemia 2 (Bd1-2)-mediated blockage of apoptosis in cancer cells. It is also useful for inhibiting Bcl-2 unction in particular, the peptide conjugate is useful for treating a subject afflicted with a cancer characterized by cancer cells that cancer includes prostate, coloretal, gastric, nor-small lung, renal or thyroid cancers, neuroblastoma, melanoma, or conjugate is also useful for treating discussed apontors of a neuroblastoma and non-small and non-small and non-small apontors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Д
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cytostatic; neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bcl-2 superfamily; BH3 domain; cell death agonist; Bad; apoptosis modulation; B cell lymphoma/leukemia 2; cancer; prostate; colorectal; gastric; non-small lung; renal; thyroid; neuroblastoma; melanoma; lymphocytic leukemia; neurodegenerative disorder; AIDS; stroke; myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New peptide conjugates for modulating apoptosis or for inhibiting cell lymphoma/leukemia 2 (Bcl-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       increased apoptosis, e.g. neurodegenerative disorders, acquired immunodeficiency syndrome (AIDS), stroke or myocardial infarction.

Claim 18; Page 19; 74pp; English.

X The invention relates to a peptide conjugate having the formula:

CC (R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached to the vide chain of the peptide where to the functional group of the side chain is NH2 or OH; or X = O or NH, when the R-X group is attached to the C-terminus of the peptide where the side chain functional group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally or convenientated with a 1-5C straight or branched chain alkyl group, phenyl optionally monosubstituted with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides AbB37001-B3708 represent examples of the peptide portion of the conjugate. The peptide corresponding to amino acids 72-97 of the BH3 domain of the conjugate. The peptide conjugate is useful for modulating apoptosis in the cells of a subject, or for reversing B cell apphoma/leukemia 2 (Bcl-2) mediated blockage of a poptosis in cancer cells of a subject, or for reversing B cell apphoma/leukemia 2 (Bcl-2) mediated blockage of unction. In particular, the peptide conjugate is useful for treating a subject afflicted with a cancer characterized by cancer cells that express Bcl-2. The cancer includes prostate, colorectal, gastric, conjugate is also useful for treating disorders characterized by increased apoptosis, e.g. neurodegenerative disorders, acquired immunodeficiency syndrome (AIDS), stroke or myocardial infarction.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Their interaction with Bol-w in sympathetic neurons.";

Hol. Cell. Neurosci. 17:97-106(2001).

Cell. Neurosci. 17:97-106(2001).

Holding to Bol-x(L), Bol-2 and Bol-w, thereby affecting the level of their ordinarization of these proteins with BAX. Can reverse the of heterodimerization of these proteins with BAX. Can reverse the death repressor activity of Bol-x(L), but not that of Bol-2 (By similarity). Appears to act as a link between growth factor receptor signaling and the apoptotic pathways.

Cell, Bol-2 and Bol-w. Also binds protein S100AlO. The Service SUDSILIATS phosphorylated form binds 14-3-3 proteins.

Cell, Bol-2 and Bol-w. Also binds protein S100AlO. The Service SUDSILIATE LOCATION: Outer mitochondrial membrane. Upon phosphorylation, locates to the cytoplasm (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright. -!-SUBCELDIAR LOCATION: Outer mitochondrial membrane. Upon phosphorytation, locates to the cytoplasm.
-!-TISSUE SPECIFICITY: EXPRESSED IN A WIDE VARIETY OF TISSUES.
-!-DOMAIN: Intact BH3 domain is required by BIK, BID, BAK, BAD AND BAX for their pro-apoptotic activity and for their interaction with anti-apoptotic members of the BC-2 family.
-!-PTM: Phosphorylated on Ser-75 in response to survival stimuli.
Subsequent phosphorylation on Ser-79 promotes heterodimerization with 14-3-3 proteins. This interaction then facilitates the phosphorylation at Ser-118, a site within the BH3 domain, leading to the release of Bcl-x(L) and the promotion of cell survival.

Ser-99 is the major site of AKT/PKB phosphorylation, Ser-118 the major site of protein kinase A (CAPK) phosphorylation (by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          similarity).
-!- SIMILARITY: Contains 1 Bcl-2 homology 3 (BH3) domain.
-!- SIMILARITY: BLONGS TO THE BCL-2 FAMILY.
-!- CAUTION: Ref. 1 sequence differs from that shown due to frameshifts in position 64 and 91.

                                    -:- FUNCTION: MAY ACT AS A CARRIER OF HYALURONAN IN SERUM OR AS A BINDING PROTEIN BETWEEN HYALURONAN AND OTHER MARTIX PROTEIN, INCLUDING THOSE ON CELL SURPACES IN TISSUES TO REGULATE THE LOCALIZATION, SYNTHEISLAND DEGRADATION OF HYALURONAN WHICH ARE ESSENTIAL TO CELLS UNDERGOING BIOLOGICAL PROCESSES.

--- SUBBUNIT: L'ALPHA-I PLASMA PROTEASE INHIBETORS ARE ASSEMBLED FROM ONE OR TWO HEAVY CHAINS (HJ, H2 OR H3) AND ONE LIGHT CHAIN, BIKUNIN, INTER-ALPHA-INHIBITOR (I-ALPHA-I) OF H3 AND BIKUNIN, AND PRE-ALPHA-LIKE INHIBITOR (I-ALPHA-L) OF H3 AND BIKUNIN.

--- PTM: HRAVY CHAINS ARE HYBELINKED WITH BIKUNIN VIA A CHONDROITIN CONSTRUCTION OF THE THEIR C-TERMINAL ASPARANTE.

--- SIMILARITY: BELONGS TO THE THEIR FAMILY.

--- SIMILARITY: BELONGS TO THE ITH FAMILY.

--- SIMILARITY: CONTAINS I VWFA domain.

Submitted (aUG-1994) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: STREEGSPECIFIC CONDENSATION OF PHOSPHOENOLFYRRUVATE (PEP)
AND D-ENTHROSE-4-PHOSPHATE (E44P) GIVING RISE TO 3-DEOXY-D-
ARABINO-EBPTULOSONAET-7-PHOSPHATE (DARF).

-!- CATALYTIC ACTIVITY: 2-dehydro-3-deoxy-D-arabino-heptonate 7-
phosphate + phosphate = phosphoenolpyruvate + D-erythrose 4-
phosphate + H(2)O.

-!- ENZIME REGULATION: INHIBITED BY TYROSINE.
-!- PATHWAX: Aromatic amino acids biosynthesis; shikimate pathway;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Kuenzler M., Paravicini G., Egli C., Irniger S., Braus G.H.;
